

# Tesla solar panels are no longer generating electricity

## Overview

---

If there is no alert, or if resolving the alert does not enable solar production, proceed with the following troubleshooting steps. Rapid Shutdown (RSD) may be initiated. We design your solar system using high-quality equipment so that your system produces clean energy for decades. As with all technology, some basic troubleshooting may be required from time to time. The system stopped producing data at 1:05 pm on Friday, 9/26/2025, even though the sun was strong. I followed the support procedure to restart both the inverter and the Gateway several times, but. The Powerwall's charge percentage dropped down to around 80% before the grid was restored, at which point the app showed the panels back online, providing power to both my house and recharging the Powerwall. For. The managing solar company is slow to react, but I don't expect much after 10 years. Historical records are limited on Tesla App (or I don't know how to read them).
