

Test of reflective film on the back of photovoltaic panels

Overview

This paper focuses on current developments in transparent anti-soiling and anti-reflective (AR) coating based on the glass application, emphasizing the solar industry. Developed specifically for concentrating solar power applications, this reflective film is used in many solar concentrators that leverage this polymer film's low cost, light weight. The newly offered product is a sheet that is laid on the ground surface at power plants installed bifacial photovoltaic modules. Improving the reflective ability of sunlight, referred to as Albedo, increases the amount of light that enters the rear side of the module, which has the effect of. In a fraction of a second, the photovoltaic (PV) reflectometer measures the reflectance spectrum of a wafer or cell that is dimensionally within 6 in.
