

Thailand assembles solar power generation for home use

Overview

The Thai government has formalised the framework for a nationwide “Community-Based Solar Power Generation Project,” targeting 1,500 megawatts of ground-mounted solar capacity as part of its “Quick Big Win” energy agenda. The decision was approved by the National Energy Policy Council on 27 October. Thailand's Ministry of Energy says it is advancing a community solar plan to add up to 1.5 GW of capacity through small ground-mounted projects selling power to local consumers at THB 2.07/kWh under long-term contracts. But government policy hinders household installations.
