

# The Camry generator has a whistling sound

## Overview

---

The whining noise may be caused by a worn out belt or pulley, a loose belt tensioner, a failing power steering pump, or a defective alternator. If the noise is coming from the engine compartment, it is likely an issue with the accessories that are driven by the engine's belts. 2025 Camry LE FWD - Whistling Sound?

I've owned this Camry for 1. Is this normal or a bad wheel bearing already?

The noise stops when I slow down or brake. Temp has. If your Toyota Camry is experiencing a whining noise, determining where and when the noise is happening is coming from is key to diagnosing and tracking down the cause. Those are pretty cheap to top up. But what happens when that serene silence is shattered?

When your trusty.
