

# The cost of removing wind power tower

## Overview

---

Current decommissioning projects worldwide can cost between \$30, 000 to \$10, 000 to dispose of a turbine. For example, removing each turbine on Wolfe Island would cost \$4. In Minnesota, Xcel Energy estimates conservatively that it will cost \$532,000 (in 2019 dollars) to decommission each of its wind turbines—a total cost of \$71 million to decommission the 134 turbines in operation at its Noble facility. Decommissioning the Palmer's Creek Wind facility in Chippewa. Wind electricity generation has grown significantly, with total annual U. electricity generation from wind energy increasing from about 6 billion kilowatt hours (kWh) in 2000 to about 380 billion kWh in 2021. 1 Decreasing wind turbine installation costs over the past decade have created more. Overall, the Assessment of Decommissioning Costs and Financing Models for Onshore Wind Turbines report from June revealed that the cost for dismantling and landscaping can reach up to close to €1 million. \* \*Includes allowance for salvage value and based on total dismantling cost estimate for the project of 8. 7% of the total plant balance of.
