

The distance between lead-acid batteries in large solar container communication stations

Overview

- The distance between battery containers should be 3 meters (long side) and 4 meters (short side). If a firewall is installed, the short side distance can be. Lead-acid battery is a type of secondary battery which uses a positive electrode of brown lead oxide (sometimes called lead peroxide), a negative electrode of metallic lead and an electrolyte of sulfuric acid (in either liquid or gel form). Someone must still work on or maintain the battery system. The Corvus BOB (Battery On Board) is a standardized, class-approved, modular battery room solution available in 10-foot and 20-foot ISO high-cube container sizes.

Safety Conditions in Battery Rooms for Renewable Energy

Lead-acid batteries necessitate a larger safety distance. The results for the required free area of ventilation for

different battery models analyzed in this chapter are presented in Fig. 3.
