

The entire hillside is covered with photovoltaic panels

Overview

A video circulating recently on social media highlights the sheer scale of the operation, showing an entire mountain range in the Guizhou province of China blanketed in solar panels. China has been pursuing renewable energy for quite some time and they have not been keeping it. JINAN -- On the rolling hillside near Chaiheyu village in Linyi, a city located in East China's Shandong province, numerous blue solar panels shine brightly in the sunlight, converting a steady stream of solar energy into green power. The solar panels are operated by Shandong Yifeng photovoltaic. Once barren, rocky mountain ridges in Guizhou are now powering over 2 million homes using solar energy! In this video, we dive deep into how engineers turned "useless" land into a \$billion-dollar clean energy hub, answering Beijing's push for 1,200 GW of solar and wind by 2030.
