

The largest single photovoltaic panel

Overview

The competitive race intensified in late 2023, led by Huasun Solar and TW Solar, both showcasing increasingly powerful panels. Huasun took an early lead with the Himalaya G12-132 HJT module, certified by TÜV SÜD in November 2023, which reached 750. The utility solar industry continues its shift toward larger-format, higher-wattage modules, with the leading edge of solar technology now pushing beyond 750W. While early leaders such as Trina Solar, Jinko Solar, Canadian Solar, Risen Energy, and JA Solar laid the groundwork for high-power panels. JinkoSolar stands as the world's largest solar panel manufacturer, shipping 47.2GW in the first half of 2024 alone. The company became the first solar manufacturer to ship 210GW of solar panels cumulatively in 2023, cementing its position as an industry titan. JinkoSolar pioneered vertically. In a move that has left energy enthusiasts and skeptics alike in disbelief, Lone Star Solar Co. has unveiled its top-secret, game-changing solar tech: the world's largest single solar panel! Measuring a mind-blowing 400 feet long and 150 feet wide, this behemoth of green innovation will cover more. The plant hosts 4 million bi-facial solar panels and is estimated to provide enough power to power nearly 200,000 households. These high-wattage panels are primarily designed for commercial and major utility projects and might not be readily available to the list. Only those projects whose generation capacity is equal to or exceeds 1MW are included in the list.
