

# The lines on the photovoltaic panel surface turn yellow

## Overview

---

This issue occurs due to the degradation of ethyl vinyl acetate (EVA), a material used as an encapsulant in the panel. Initially clear the EVA can turn visibly yellow or even brown over time. Apart from its aesthetic impact, yellowing affects the. Solar panel discoloration is typically the result of long-term exposure to the elements, such as sunlight, rain, and dust. Preventive measures such as using high-quality components, proper installation, regular cleaning and.
