

# The power generation of one square meter of solar panels per hour

## Overview

---

15/kWh electricity rates, 1m<sup>2</sup> panels can generate \$30-\$50 annual savings. Q: Do panels work on cloudy days?

A: Yes! Modern panels produce 10-25% of rated capacity under cloud cover. Under optimal conditions (5 peak sun hours): At noon under direct sunlight: \*Note: 1m<sup>2</sup>. The most significant factor determining a solar panel's output is the amount of sunlight it receives. This is measured in "Peak Sun Hours. Installation Angles: Catching Every Ray Improper tilt can reduce output by 10%-30%. Consider a solar panel with a power output of 300 watts and six hours of direct sunlight per day.
