

The role of single-phase bidirectional inverter

Overview

Whether in residential solar setups or large-scale Battery Energy Storage Systems (BESS), bi-directional inverters ensure seamless power flow in both directions—charging and discharging—between sources, storage units, and the grid. This dual capability makes them essential in today's Battery energy systems, acting as a bridge between various. This reference design provides an overview into the implementation of a GaN-based single-phase string inverter with bidirectional power conversion system for Battery Energy Storage Systems (BESS). The proposed inverter has a T-type switching leg and a half-bridge switching leg.
