

# The role of uninterrupted power supply in base station rooms

## Overview

---

An uninterruptible power supply (UPS), also known as a battery backup, provides backup power when your regular power source fails or voltage drops to an unacceptable level. A UPS allows for the safe, orderly shutdown of a computer and connected equipment. By providing seamless power during interruptions, these systems are valuable in various environments, especially those reliant on. This article delves deep into the role, technology, maintenance, and future trends of UPS batteries in telecom base stations, offering a detailed exploration of how these systems safeguard uninterrupted operation. Practice shows that the existing energy supply sources - the power grid, diesel generators and batteries - do not allow for effective operation in. When constructing more efficient buildings for greater overall savings, Building Teams need to utilize uninterruptible power supply (UPS) systems that are reliable, efficient, have a smaller footprint and are rapidly deployed.
