

# The tower in the middle of the solar power plant

## Overview

---

A solar power tower, also known as 'central tower' power plant or ' heliostat ' power plant, is a type of solar furnace using a tower to receive focused sunlight. It uses an array of flat, movable mirrors (called heliostats) to focus the sun's rays upon a collector tower (the target). Concentrating. Central tower solar power plants fall into the category of concentrated solar systems. They concentrate solar radiation from a huge area into a very small space on top of a tower.

### What Is a Solar Tower and How Does It Work?

Solar towers are sometimes also called heliostat power plants because they use a collection of movable mirrors (heliostats) laid out in a field to gather and focus the sun at the tower. By

### 10.3. Central Receiver Systems

Central receiver systems are typically large-scale plants that are usually built to power a steam cycle. The central position of the receiver offers a universal advantage to collect all energy at one location ...

### An Overview of Heliostats and Concentrating Solar Power Tower ...

This overview will focus on the central receiver, or "power tower" concentrating solar power plant design, in which a field of mirrors - heliostats, track the sun throughout the day and year to reflect solar ...

## Solar power tower

As explained briefly above, a solar power tower is one of the main components of a solar power plant. This tower is placed in the center of a large array of mirrors.
