

UK Smart Energy Storage Solutions

Overview

The United Kingdom is experiencing a remarkable shift in energy policy, with home energy storage systems moving from niche technology to essential household infrastructure. Battery energy storage solutions (BESS) are the crucial shock absorbers for our national grid. This simple idea is now absolutely essential for managing the intermittent nature of wind and solar not to. The UK is aiming to achieve a net-zero electricity grid by 2035, underpinned by its legally binding 2050 net-zero emissions goal. This ambitious goal demands an accelerated transition to renewable energy sources like wind and solar. It works by using surplus electricity to pump water from a lower to an upper reservoir. Recent government initiatives, including enhanced feed-in tariffs and the Smart Export Guarantee (SEG), are making battery.
