

United states energy independence

Overview

United States energy independence is the concept of eliminating or substantially reducing import of petroleum to satisfy the nation's need for energy. Some proposals for achieving energy independence would permit imports from the neighboring nations of Canada and Mexico, in which case it would be called North American energy independence. Energy independence is espoused by historical trend. In the early 20th century the United States became a major oil supplier to the world. World War II prompted a change. Some proponents of US energy independence promote wider use of alternatives such as coal, natural gas, and other fossil fuels. A 2013 report published by the Congressional Budget Office. In his 2001 State of the Union address, President declared that the United States will never again import as much oil as it did in 1977. In his 2006 State of the Union address, President.
