

Vatican Telecom Base Station Installs Photovoltaic

Overview

Pope Francis has ordered the construction of a solar power plant to supply the Vatican's electricity needs. Italian energy supplier ACEA installed the photovoltaic roof in just six months in the Courtyard of the Corazze entrance. "The most difficult thing is to integrate and find spaces to build photovoltaic infrastructure in places that are already heavily built up," said ACEA president, Barbara. ROME (AP) — Italy agreed Thursday to a Vatican plan to turn a 430-hectare (1,000-acre) field north of Rome, once the source of controversy between the two, into a vast solar farm that the Holy See hopes will generate enough electricity to meet its needs and turn Vatican City into the world's first. In line with the principles of the encyclical *Laudato Si'* and a United Nations agreement on climate change, Pope Francis is making the Vatican "greener. He did so with the apostolic letter. On July 31, at the historic Palazzo Borromeo, the Holy See and the Italian Republic signed a landmark agreement to build an agrivoltaic system in Santa Maria di Galeria. In an apostolic letter issued "motu. The installation of solar panels on Vatican-owned land to the north of the capital follows the photovoltaic glazing of the Cortile delle Corazze and the Vignaccia warehouse of the Vatican Museums (350 kilowatts peak for a total production of 500 megawatt hours) and the 5,000 square metre roof of.
