Verne Teams Up with Equipment Rental Company for Hydrogen Power

The California-based company aims to

deliver quiet and clean on-site power generation solutions to key sectors such as ports, EV charging infrastructure, construction sites, and data centres.

[Learn More](#)

Verne data centers: Powering the future of AI and HPC with 100%

Verne's data centers are powered by a combination of geothermal, hydroelectric, solar, and wind energy sources, and--because of their locations--are naturally cooled by the climate.
