

Vietnam solar power crisis

Home Energy Storage (Stackble system)

High Efficiency

Easy installation

Safe and Reliable

Perfect
Compatibility

Product Introduction

- Scalable from 10 kWh to 50 kWh
- Self-Consumption Optimization
- Integrated with inverter to avoid the compatibility problem

- LFP battery, safest and long cycle life
- Stackable design, effortlessly installation
- Capable of High-Powered
- Emergency-Backup and Off-Grid Function

Overview

A festering legal crisis is threatening to derail Vietnam's energy development plans. 173 solar and wind projects, representing about US\$13 billion in investments, are stuck in limbo due to ongoing disputes regarding their feed-in-tariffs (FITs) – the guaranteed payments that they receive. In Vietnam, an impasse over feed-in-tariffs for renewable energy producers threatens foreign investors' confidence in government policies. Wind turbines and solar panels are being installed in Vietnam. Vietnam houses nearly 70 per cent of Southeast Asia's renewable energy capacity. This boom results from favourable government policies, rapidly growing energy demand and ideal conditions for solar energy. With abundant solar potential due to its geographical location, the country has become a significant player in the Southeast Asian region. Vietnam's remarkable achievements in solar and wind power output, accounting for 69% of ASEAN's total in 2022, have positioned the country as a key player in the region's renewable energy landscape.

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled
