

# What are the photovoltaic panel comparison indicators

## Overview

---

System data is analyzed for key performance indicators including availability, performance ratio, and energy ratio by comparing the measured production data to modeled production data. This report presents a performance analysis of 75 solar photovoltaic (PV) systems installed at federal sites, conducted by the Federal Energy Management Program (FEMP) with support from National Renewable Energy Laboratory and Lawrence Berkeley National Laboratory. This comprehensive study explores the pivotal role of technical KPIs, discussing their challenges, application potentials. Effective solar KPIs should disambiguate resolvable losses, enable quick responses, and clearly identify healthy performance without requiring additional context. From investors and asset managers to operation and maintenance (O&M) providers, stakeholders rely on KPIs to assess system reliability, guide decision-making, and analyze. Measuring the performance of Solar Power Plants (SPP) is crucial for ensuring clean and sustainable energy production.
