

# What are the types of base station communication towers

## Overview

---

Macro cell, Micro cell, Pico cell and Femto cell are 4 types of base stations in wireless communication networks. It provides connectivity between devices to devices or devices to network for network accessibility in all the available devices efficiently. A cell site, cell phone tower, cell base tower, or cellular base station is a cellular -enabled mobile device site where antennas and electronic communications equipment are placed (typically on a radio mast, tower, or other raised structure) to create a cell, or adjacent cells, in a cellular. Communication towers are all around us in various shapes and forms. Some towers serve several kinds of signals. They transmit one-way broadcasts like AM/FM radio and television signals while also handling two-way cellular traffic using various protocols. Macrocell antennas must be properly mounted on ground-based masts, rooftops or other existing structures and at heights for an unhindered, clear view of the surroundings.
