

What are the usage indicators of photovoltaic brackets

Overview

At present, there are 3 types of brackets used in most PV power plants: fixed conventional bracket, adjustable tracking bracket and flexible PV bracket. This refers to the mounting system where the orientation, angle, etc. Let's face it - solar panels get all the glory while photovoltaic brackets work backstage. In this guide, we'll crack open the toolbox of. Compared with fixed PV mounts, solar tracking brackets can automatically adjust the angle of panels so that they always face the sun and maintain the optimal angle of light reception at different times, thus increasing the energy output of the PV system. The fixed bracket is self-explanatory.
