

# What is the export price of Thai solar panels

## Overview

---

In 2023, Thailand imported solar cell worth approximately 15,990 million THB, a decrease of 1,140 million THB or 7% from the previous year, while exported approximately 45,580 million THB, an increase of 17,720 million THB or 64% from the previous year (Figure 2). The factory operated by Standard Energy Co, a subsidiary of Singaporean solar cell giant GSTAR, shut its doors last month in anticipation of United States President Donald Trump's tariffs on solar panel exports from Southeast Asia. From Monday, US Customs and Border Protection will begin imposing. On a humid day in February, a small group of workers huddled in front of a large solar panel factory inside Thailand's biggest manufacturing hub in the eastern coastal province of Chonburi, home to some of the world's top solar panel-producing companies. This dramatic surge in tariffs will likely reduce Thai exports to near-zero levels by 2026. The case was brought last year by Korea's Hanwha.
