

# What is the white color on the back of the photovoltaic panel

## Overview

---

EVA (ethylene vinyl acetate) is a plastic material that goes on the back of your PV panel to seal against the elements. **White Backsheets:** These classic beauties flaunt a grid-like appearance, thanks to their white reflective layer. Imagine your roof with a checkerboard pattern—timeless, traditional, and a touch of that high-tech geek charm. Perfect for those who love a bit of vintage with their voltage. Surface contamination often results from dust, bird droppings, or pollen that accumulates. The white color is conducive to the light reflection of the gap between the cells to the front surface, part of the light will be reflected back to the solar cell, increasing the utilization of light. Another advantage of transparent. White solar panels can be just as efficient as regular blue/black panels, if not more so.

## What is the white color on the back of the photovoltaic panel

---

### What is Solar Panel Backsheet and Its Benefits?

Most people know the key parts of a solar panel like the photovoltaic cells and the frame. But, there is one part that is important and often goes unnoticed - the solar panel back sheet.

### Why is the back of the photovoltaic panel white

The technology inside a white solar panel is the same as in a regular solar panel, except that it has a white plastic layer covering the panel. This layer works by scattering visible light when it hits the ...

### Can Solar Panels Be White?

## [Updated: January 2026]

White solar panels use a nano technology film to reflect sunlight, which helps to reduce the amount of heat that is absorbed by the solar panel. This increases the efficiency of the solar panel, ...

### Is it okay for the back of the photovoltaic panel to be white

PV backsheet is a special layer that covers the back of a solar panel. Its primary role is to protect the solar cells and internal components, enhancing the panel's performance and extending its lifespan.
