

What size cable should be used for solar inverters

Overview

The most common size cable used for connecting solar panels to an inverter is the 10 AWG cable. The AWG sizing system indicates a wire's diameter (and therefore cross-sectional area) based on how often it has been put through a wire stretching machine or similar. If you go any longer then you will need to use a bigger gauge wire to account for resistance that lowers. Proper solar panel wire sizing is critical for system safety, efficiency, and compliance with electrical codes. Using undersized wire in your solar installation can result in dangerous overheating, significant energy losses from voltage drop, and costly equipment failures. Inverter output cables transmit electricity from the inverter to the main electrical panel or distribution board, and the appropriate AC wire size should be chosen in compliance.

What does the C++ standard say

about the size of int, long?

If the size of the int is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have issues on a 32bit ...

What's sizeof(size_t) on 32-bit vs the various 64-bit data models?

So, the size of `size_t` is not specified, only that it has to be an unsigned integer type. However, an interesting specification can be found in chapter 7.18.3 of the standard: limit of `size_t` `SIZE_MAX` ...
