

# What to do if there is snow on photovoltaic panels

## Overview

---

In most cases, you shouldn't need to clean snow off your solar panels. Light can get through the panels when there's a light dusting of snow, and when the snow is heavier, the 45-degree angles of most equipment should facilitate the snow sliding right off. While the efficiency of solar panels drops in winter, proper snow removal techniques can help keep this loss to a minimum. While snow can temporarily reduce output, its impact is often smaller than expected. In this article, we explore the importance of removing. This section will discuss how to keep snow off of solar panels, ensuring they operate at peak efficiency even under a blanket of snow. Strategies for preventing snow build-up range from mechanical methods, such as using snow rakes or brushes, to technological solutions, such as installing heating.
