

Which kind of roof cannot be used for photovoltaic panels

Overview

The answer is simple – rubber roofs are not a good choice for solar panels. Some are ideal, while others require more concentration. Not every roof is ideal for solar panel installation - certain materials, angles, and structural factors can make installation difficult or even impossible. So, how do you determine your roof's solar suitability?

Factors like shading, available space, and roof type all impact solar panel. When determining whether a roof is ideal for solar panels, there are few things that should be kept in mind.
