

# White spots on the surface of photovoltaic panels

## Overview

---

The most common cause of white spots is moisture seeping into the module laminate. A solar module is built like a sandwich, with the solar cells and encapsulant sealed between glass and a backsheet. The edge seal is the first line of defense against the elements. They might seem like a minor cosmetic issue, but these „white spots“ are often the first visible signs of a deeper problem that can compromise a module's performance. If you've noticed mysterious white spots on your photovoltaic (PV) panels, you're not alone. Delamination often takes place in tropical climates, and semi-flex panels are especially vulnerable. This issue may affect the aesthetic appearance of the panels, but it does not generally impact their functionality or efficiency. However, severe discoloration could. Why do solar panels turn white?

Solar panels may appear white for various reasons, primarily associated with 1.

## White spots on the surface of photovoltaic panels

---

### What s wrong with the white spots on the photovoltaic panel surface

The hotspot effect refers to localized areas of overheating on the surface of individual solar cells within a solar panel. This phenomenon occurs when certain cells in a panel generate less electricity than ...

## Most common solar panel defects and how to deal with them

Eventually, hot spots in solar panels become visible to the eye: the problematic cell becomes brownish. Hot spots lead to a faster solar panel degradation and can even start a fire on ...

[Learn More](#)

## There are white spots on the photovoltaic grid line

Solutions to solar panel discoloration include regular professional cleaning, proper installation, monitoring system performance, and contacting the installer for assessment and guidance.
