

# Who has more factories producing photovoltaic panels

## Overview

---

China produces 86% of the world's solar panels each year, according to Germany's Fraunhofer Institute for Solar Energy Systems. In comparison, Europe and North America each produce around 2%. It therefore makes sense that eight of the world's nine largest solar manufacturers are. "Solar panel production" is often quoted as if it were a single, perfectly tracked statistic. For a 2025 snapshot, this page uses the latest fully consolidated year of PV module production (2024) and treats it as the. The 10 photovoltaic module producers leading global output face falling prices, fierce competition, and growing manufacturing overcapacity. In recent years, global production of crystalline silicon modules exceeded five hundred gigawatts, nearly doubling the previous year. Many solar module companies have established manufacturing and R&D units for solar panel manufacturing and solar PV tech improvements as a part of the mission solar energy. Harnessing solar power is not only a necessity but also a much-needed enabler of the global energy transition.
