

Why is there no solar power generation in Northern Europe

Overview

Solar energy potential is vast in Europe, yet its adoption remains limited, 2. regulatory challenges, and 4. Why is there no solar power in Europe?

1. The legacy of. Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a “major milestone” in the transition to clean power. A new report from energy think tank Ember has found that renewable energy produced almost half of EU power last year, despite a drop in hydro. Utility-scale solar projects in Sweden, Finland and Denmark are flourishing, while battery storage and AI are reshaping what's possible. Image: Alight Forget any preconceptions about solar power in the Nordics; the cold, seasonally dark region is fast becoming a solar success story. 500 times since the beginning of the millennium, when the grid-connected solar era began with Germany's introduction of the feed-in tariff law.

Why is there no solar power generation in Northern Europe

Solar energy

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...
