

# Why should solar power be connected to the grid

## Overview

---

While solar panels generate DC electricity, the grid operates using AC (alternating current) electricity. This means that homes and businesses can't directly use DC electricity from solar panels. For most of the past 100 years, electrical grids involved large-scale, centralized energy generation located far from. Professional Installation is Critical: Grid-tied solar systems require licensed electricians and multiple permits, with the interconnection process typically taking 2-8 weeks and costing \$200-\$2,000 in fees alone. Load-Side Connection Dominates Residential Installations: The 120% rule limits total. We believe the solar power industry and the electric grid can enjoy mutual benefits through increased energy supply that stabilizes when, where, and how electricity is generated and distributed. These attributes—consolidating variable individual loads.
