

Will photovoltaic panels be damaged by light blocking them

Overview

Lightning strikes can damage solar panels directly or indirectly. Surge protection devices like Citel DS72-RS-120 are recommended. While comprehensive research shows solar installations are remarkably resilient to extreme weather, lightning represents one risk factor worth addressing. When lightning damage does occur, it accounts for 32% of weather-related solar panel incidents, making proper protection a valuable investment. Solar panels generate power by absorbing light, so any light reflected is energy wasted. Solar panels are generally low-maintenance, but Photovoltaic (PV) modules require regular maintenance, so while solar is passive, you don't get to be. Evaluate the Installation's Impact, 2. Address Potential Issues with Direction, 3. Enhance Surrounding Visibility, 4. This obstruction can be caused by various factors, including: The impact of shading goes beyond the simple loss of sunlight on the shaded area.
