

# Wind power generation in Argentina

 **TAX FREE**    

## ENERGY STORAGE SYSTEM

**Product Model**  
HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

**Dimensions**  
1600\*1280\*2200mm  
1600\*1200\*2000mm

**Rated Battery Capacity**  
215KWH/115KWH

**Battery Cooling Method**  
Air Cooled/Liquid Cooled

The image shows a tall, grey Energy Storage System (ESS) unit with a black top and bottom. It features two vertical green lines running down the center. A blue hexagonal warning symbol is in the middle, and two yellow triangular warning symbols are at the bottom. The letters 'ESS' are printed in green on the upper right side of the unit.

## Overview

---

Today, with official data at the end of 2025, we can confirm that this trend not only continued, but that Argentina set a historic record for renewable energy generation, reaching unprecedented levels of coverage, significant advances in installed capacity, and new. Today, with official data at the end of 2025, we can confirm that this trend not only continued, but that Argentina set a historic record for renewable energy generation, reaching unprecedented levels of coverage, significant advances in installed capacity, and new. Argentina's vast solar, wind, and hydroelectric renewable energy potential, give it the possibility to decarbonize its power sector and support its COP26 goal of increasing the share of renewable energy in its national energy matrix to 30 percent by 2030. Renewables' share of power generation. According to GlobalData, wind power accounted for 8% of Argentina's total installed power generation capacity and 10% of total power generation in 2023. Fossil energy, primarily driven by gas, comprises a slight majority, with a bit more than half at approximately 53%. With its vast plains and coastal regions, the country is ideally situated to exploit wind power, a clean and renewable source of energy. The Argentine government, in an. This progress is reflected in the latest report from the Compañía Administradora del Mercado Mayorista Eléctrico (Cammesa), which reported a cumulative generation of 12,440 GWh of clean energy in the first semester of 2025, marking a 17% year-on-year increase compared to the 10,630 GWh recorded.
