

# Wind power generation lock

## Overview

---

In 2019, Nordex consulted with EMKA to design a locking system which secures vital access points and must withstand forces of up to 331N. The compression latches are located in the rotor head of the turbine. In response to these threats, utility. Vanma Lock systems enhance security and streamline operations in the lottery industry and are also applicable across various sectors including telecommunications, power, banking, and logistics. Visit our virtual environment to see how Nord-Lock Group can provide solutions to your offshore wind applications. 5 megawatts, from  $-30^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$ .
