

# Wind power generation system wind curtailment rate

## Overview

---

The following charts show the daily and 7-day wind and solar curtailment by category, if any. Curtailment is when electricity. Wind curtailment refers to the deliberate reduction of electricity output from wind turbines, despite their capability to generate power under existing wind conditions. This practice is typically implemented by grid operators to maintain the stability of the electrical grid or to address specific. This marginal curtailment rate of 9% far exceeds California's average solar curtailment rate of 4. sions in other renewable technologies. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [www.nrel.gov](http://www.nrel.gov).

## Wind power generation system wind curtailment rate

---

### WIND AND SOLAR ENERGY CURTAILMENT

Figures 3 and 4 illustrate wind and solar curtailment, respectively, in selected countries or areas in the form of C-E maps (correlation maps between energy share of wind/solar/wind+solar and annual ...

### Latest wind and solar curtailment

## information: statistics and future

The latest information and the future estimations of curtailment in several countries/areas are summarised, including Ireland, California and Texas in U.S., and Japan.

## Estimates of the marginal curtailment rates for solar and wind generation

Across markets worldwide, average curtailment rates for wind and solar are

generally quite low, often around 3%.  
However, these low average curtailment rates may overstate how much ...
