

Xia lithium battery bms function

Overview

A Battery Management System (BMS) is the brain and safety layer of any lithium battery pack. It monitors cells, protects against abuse, balances differences between cells, estimates state of charge/health, and communicates with the rest of the device or vehicle. The BMS continuously checks each cell's voltage during charging. Simply put, every lithium battery must include a Battery Management System. Its function is similar to that of an automobile's ECU (engine control unit), which monitors the battery status in real time to avoid problems such as overcharging, over-discharging. It is a sophisticated electronic system that manages rechargeable batteries, such as lithium-ion batteries, by diligently monitoring their state, calculating secondary data, reporting that data, protecting the battery, controlling its environment, and balancing it. This comprehensive management is.

ENERGY STORAGE SYSTEM

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

What is BMS on a Lithium Battery and Why Is It So Important

It performs continuous monitoring of voltage, current, temperature, and the overall health of the battery cells. In simple terms, the BMS monitors each cell, calculates safe charging and ...
