

# Xiaomi petal-shaped photovoltaic panels

## Overview

---

The SmartFlower panels are a combination of solar panels and advanced technology. The panels angle their petals towards the sun at 90 degrees and start producing electricity. Whether you are. Of late, the solar panel market is dominated by newer inventions that are not as flat, rectangular, or rigid in comparison to their older solar panel counterparts. This 'smart' solar panel system is an all-in-one, self-sustaining system that differs greatly from the traditional monocrystalline or polycrystalline rooftop. With energy prices soaring 18% year-over-year (2024 Solar Industry Report), Xiaomi's unexpected move into photovoltaic panels couldn't have come at a better time. The tech giant known for smartphones and smart home devices has quietly launched three solar panel models in European markets last. According to Engineerinc, Solar Flowers, sometimes referred to as SmartFlower Solar, are unique ground-mounted solar panel systems that include high-tech elements like a sun tracker. Unlike the usual monocrystalline or polycrystalline rooftop panels, these solar flowers are special because they are. The quick summary: Petal-shaped solar panels called Smartflower track the sun like sunflowers, generating 40% more energy than traditional fixed panels while offering an aesthetically pleasing alternative for locations where conventional panels don't fit.

## Xiaomi petal-shaped photovoltaic panels

---

### Petal-shaped PV panels embrace curved roofs effortlessly

Designed to mimic the natural movements of flowers, particularly sunflowers, the Smartflower's petals adjust throughout the day to capture maximum sunlight. This design approach ...
